

Construction Related Waste

CBI is committed to reducing the amount of construction related waste that enters our area landfills. As a General Contractor participating in building and renovation projects, we have established the following policy to increase our awareness and effectiveness of sustainable construction techniques. Our goal is to continually increase our efforts to protect our natural resources.

- Reuse or recycle items scheduled for demolition and disposal. Salvage items for use on future projects. Encourage these considerations during project planning and design.
- Choose products with readily available recycling locations.
- Provide separate containers for waste and recycled items.
- Provide the best choice and use of product sizes.
- Choose products with recycled content.
- Protect products delivered to project site.
- Properly dispose of hazardous materials. Make certain that hazardous materials are delivered to facilities that properly handle these materials.
- Seek additional recycling opportunities.
- Increase new product knowledge.
- Improve installation techniques.
